

# Paediatric Trauma

## Interactive Webinar

Paediatric trauma cases are one of those 'Low frequency, High acuity' situations that is a critical event not just for the patient, but the parents and the clinicians who care for them. Children who sustain trauma depend on solid knowledge of paediatric anatomy and physiology, thorough assessment, good out of hospital care and at times effective referral or resuscitation.

Join Kate Bassett, a senior Paediatric emergency consultant at the Queensland Children's hospital, as she discusses paediatric assessment and management of traumatic events, both high and low acuity.
